TIC-TAC-TOE Game Project:

SCREENSHOTS:

QUERIES:

How will the other player know about losing game?

When the player 1 or player 2 loses the game, he/she will receive a notification that will show "Player 1 Loses" or "Player 2 Loses".

The Player that won the match will get the notification of "Player 1 Won" or "Player 2 won". By adding this option of notification, both players will know about loser and winner.

There should be a notification of starting a new game that will confirm from both players to start a new game.

When the 1st game ends, the system will confirm from both players to start a new/another game.

This will be a future enhancement for the Tic-Tac-Toe Game Project. The game will become better by adding this feature.

Can both players play game on different computers/devices?

No, they can't play. This is a Real-Time game project, but they can't play. Although both boards of both players are separate.

This can also be a future enhancement to add the feature of playing on 2 different devices.
